## Plots

# Residuals

Residuals

The figure displays the convergence of residuals for seven different variables over 6000 iterations. The y-axis uses a logarithmic scale from  $1.00 \times 10^{-4}$  to  $1.00 \times 10^1$ . All variables show a sharp increase in residual magnitude around iteration 3700, followed by a period of relative stability or slight growth. The 'omega' variable exhibits significantly higher noise and larger final residuals compared to the others.
